

Internship Progress

Name:- Bhagyashree Rajgonda Patil

Company :- BDS

Project :- Danphe HIMS(HealthCare Management System)

Technologies Used

- • Frontend: Angular 7.2.4
- • Backend: .NET Framework 4.6.1
- • Database: SQL Server
- • Tools: VS Code, Node.js 16.20.2

Week 1- Project Setup

- Understood the overall project workflow
- Learned system architecture of the project
- Installed required software, tools, and dependencies
- Faced and resolved version compatibility issues
- Successfully ran the project on local system

Week 2 – System Usage & Development

- Worked on different system modules
- Added new sections to existing modules
- Integrated modules with the database
- Implemented **GET, POST, and PUT APIs**
- Debugged issues using the browser Inspect tool

Week 3 – ABDM & ABHA

- 
- Studied **ABDM (Ayushman Bharat Digital Mission)**
 - Understood objectives of ABDM in digital healthcare
 - Learned importance of **ABHA (Ayushman Bharat Health Account) Number**
 - Understood usage of ABHA in patient identification
 - Used APIs to generate **ABHA Number**
 - Generated **ABHA Card** through system integration

Tools & Learning Outcomes

Tools & Technologies:

-  Web APIs
-  Relational Database
-  Browser Inspect Tool
-  Postman

Learning Outcomes:

-  Gained real-time project exposure
-  Improved API integration and debugging skills

Conclusion

- Completed project setup, development tasks, and ABDM-related activities.
- Gained hands-on experience with healthcare software systems.
- Enhanced technical knowledge and problem-solving skills.
- Developed practical skills applicable to real-world software development.
